

PETRO PAD

Presents the Multipurpose “PETRO PAD”

One of our most versatile products!

Get Petro Pads working for you!

These economical, easy to use pads are based on our exclusive patented technology. They are essentially polyester “pockets” filled with unique absorbent material. The absorbent material is designed to both remove oil sheen in water, and also to act almost immediately to form a solid plug in the case of a major spill. The effectively stops the flow of any liquids.

There are a multitude of uses for these versatile products. They can be used in our Basket Filters for the removal of oil sheen in water being discharged into storm and sewer drains, while at the same time providing complete protection against major spills. They can also be fitted into California type drains, where they can provide protection in settings such as automotive and machine workshops. They can also be used for collecting drips from equipment such as transformers leaking oil, while still allowing water to pass through the pad.

Protect California style drains while maintaining good water flow.

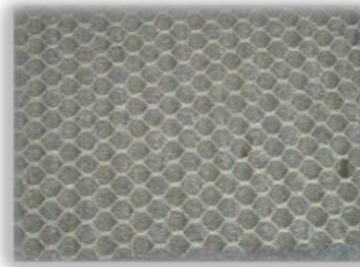

In conjunction with the Basket Filter, Petro Pads provide outstanding protection for storm drains.

Installation is easy!

PETRO PAD

Petro Pad Product Details and Performance

A unique oil absorbing fabric, and a firm yet flexible grid form the basis of each pad.

A specialized, patented formula of absorbents based on your particular needs are added.

A tough protective outer covering capable of filtering out dirt and debris completes the pad..

Petro Pads are available in standard as well as custom sizes and shapes. We aim to meet your specialized needs, and can provide formulations for pads that protect against a wide variety of contaminants.

- ✓ Transformer Oil.
- ✓ Motor Oil.
- ✓ Gasoline and Diesel.
- ✓ Mineral Spirits.
- ✓ Hydraulic IOi.
- ✓ Bio-Diesel.
- ✓ Mineral Oil.
- ✓ Transmission Fluid.

Automotive Blend: works with transmission fluid, diesel and gasoline, motor and hydraulic oils!

Petro Pads demonstrate excellent water flow rates, while at the same time providing superior protection and filtering ability. For pads 1 inch thick and 1 square foot in area, it has been shown that the water flow through the pad is 10-12 US gallons per minute. Such a pad has the capability of removing up to 1L of sheen oil.
